R chapter codes tend to reflect that the IEP health-related service professional is providing a service to treat a sign, symptom or condition when a diagnosis is not known/available. Other chapter codes are used when it is known that a diagnosis (disease/disorder) has been determined by a primary care provider or mental health professional.

Although drill down specificity in ICD-10-CM code assignment is preferred practice, it is possible to determine condensed lists of codes that are sufficiently inclusive of most diseases and disorders, or signs/symptoms/conditions seen in children served by school Occupational Therapists and Physical Therapists. The chart below is an example of a condensed list of codes, reflecting the most commonly occurring types of "billable" health related services being provided.

	Occupational Therapy
